

# Utility Rebates are available for Changing out Existing Equipment

## Residential

Air West participates in rebate programs that local utilities offer. Progress Energy and TECO offer rebates on higher SEER (Seasonal Energy Efficiency Ratio) replacement heat pump systems. The higher SEER rating your new equipment has, the higher the rebate you will receive.

Why are they offering this?

A heat pump with a SEER of at least 12 and a HSPF (Heating System Performance Factor) of 7.0 or higher can lower your heating and cooling portion of your electric bill significantly.

## Utility Rebates from TECO

Rebates and Incentives for residential customers are up to \$250.00. Rebates for commercial customers are \$.002083 per BTU (which is about \$25.00 per ton). Please visit their web site for more information on their rebate program at

# Progress Energy Rebates

## Qualifications for a residential rebate

- Complete a Home Energy Check (free from Progress Energy)
- Choose a HVAC dealer, like Air West A/C Inc., who participates in the program.
- Replace your electric strip heat or less-efficient heat pump with a 12 SEER or higher heat pump system.
- Install or replace a Heat Recovery Unit

Residential rebates are available up to \$350 and up to \$450 with Heat Recovery Unit.

Please visit their website to find out more.

Progress Energy also offers energy rebates to their commercial customers. If you are building a new facility or replacing old equipment, your company may be eligible for rebates that start at \$100 per kw or approximately \$25.00 pre ton. You should call Progress energy or visit their site at <http://www.progress-energy.com/bec> to schedule a free Energy Analysis before you proceed with your project.
